Data Types

These data types are used to design the database schema. These will not necessarily be the data types used in the responses of the MagentaM3 API

Name	Type
User	<pre>1 { 2 id: id, 3 display_name: string, 4 country: string (ISO 3166-1 alpha-2 code), 5 email: string, 6 playlists: [Playlist], 7 images: [Image], 8 uri: string (link) 9 }</pre>
Playlist	<pre>1 { 2 id: id, 3 collaborative: boolean, 4 description: string, 5 images: [Image], 6 name: string, 7 owner: User, 8 tracks: [PlaylistTrack] 9 snapshot_id: string, 10 uri: string (link) 11 }</pre>
PlaylistTrack	<pre>1 { 2 id: id, 3 added_at: date, 4 added_by: User, 5 track: Track, 6 playlist: Playlist 7 }</pre>
Track	<pre>1 { 2 id: id 3 album: Album, 4 artists: [Artist], 5 duration_ms: integer, 6 disc_number: integer 7 explicit: boolean, 8 name: name, 9 popularity: integer from 0 to 100, 10 preview_url: string, 11 track_number: integer, 12 uri: string (link) 13 // no images yet 14 }</pre>

Album	<pre> 1 { 2 id: id 3 album_type: string one of ("album", "single", "compilation"), 4 total_tracks: integer, 5 images: [Image], 6 name: string, 7 release_date: date, 8 release_date_precision: string one of ("year", "month", "day"), 9 uri: string (link), 10 artists: [Artist] 11 }</pre>
Artist	<pre> 1 { 2 id: id, 3 name: string, 4 uri: string (link), 5 }</pre>
Image	<pre> 1 { 2 id: id, 3 url: string (link), 4 height: integer, 5 width: integer 6 }</pre>

Interface

Method	tRPC Route	Description
Mutation	user.syncSpotifyData	Synchronises an MM3 user with Spotify data
Query	playlist.getPlaylists	Provides a list of playlists owned by the user
Query	playlist.getPlaylist	Returns information about a playlist including its tracks
Mutation	playlist.syncPlaylist	Synchronises an MM3 playlist with Spotify data
Mutation	playlist.updatePlaylist	Updates a playlist across MM3 and Spotify

Limitations

- No handling of market logic, content restrictions, explicit content information, copyrights
- Doesn't support local files
- Doesn't have external ids in entities
- No logic regarding genres for artists/albums or audio analysis for songs
- Only one-way relationship for album and tracks: can get album from track but not tracks from album
- Can't handle episodes, only tracks
- No UserTrack entity that stores information about the track per user e.g. tags the user has used
